Option 300
Gull Wing Surface Mount Option for Optocouplers

Data Sheet

Description
Option 300 is available on most optocouplers. It consists of standard dual-in-line package devices with gull wing leads. The lead profile is designed to be compatible with standard surface mount processes.

Option 300 enables electronic component assemblers to include Avago Technologies optocouplers on a PCB that utilizes surface mount processes. These options do not require “through hole” in a PCB. This reduces board costs, while potentially increasing assembly rates and component density per board. For the maximum solder reflow thermal profile, please refer to Figures 8 and 9.

Ordering Information
To obtain optocouplers with gull wing leads, order the standard part number and Option 300. Example:

HCPL-2630#300

For Option 300, 4-Pin 300 mil package is shipped in tubes with 100 units per tube. 6-Pin 300 mil package is shipped in tubes with 65 units per tube. For solid state relay (Photo MOSFET) parts, their 6-Pin 300 mil or 8-Pin 300 mil packages are shipped in tubes with 50 units per tube. 8-Pin 300 mil package is shipped in tubes with 50 units per tube. 8-Pin 400 mil package is shipped in tubes with 42 units. To obtain optocouplers with gull wing leads shipped in tape and reel, order Option 500 instead of Option 300.

NOTE: FLOATING LEAD PROTRUSION IS 0.25 mm (10 mils) MAX.
Solder Reflow Temperature Profile

1) One-time soldering reflow is recommended within the condition of temperature and time profile shown at right.

2) When using another soldering method such as infrared ray lamp, the temperature may rise partially in the mold of the device. Keep the temperature on the package of the device within the condition of (1) above.

Figure 9. Maximum solder reflow thermal profile for 8-pin 300 mil and 8-pin 400 mil packages.
Recommended Pb-Free IR Profile

![Graph showing recommended Pb-Free IR profile with notes and specifications]

**NOTES:**
The time from 25 °C to peak temperature = 8 minutes max.

\[ T_{\text{max}} = 200 \, ^\circ\text{C}, \quad T_{\text{min}} = 150 \, ^\circ\text{C} \]

**NOTE:** Non-halide flux should be used.

* Recommended peak temperature for widebody 400milis package is 245 °C
