

## Avago Compatibility Report for iMR SAS Gen2 Controllers

Avago's interoperability testing verifies basic functionality with a member of the controller family listed below. It is important to note that this testing is not a full integration test effort nor does it attempt to verify the tested device's conformance to industry standards.

The following report is not intended to be a comprehensive matrix of testing, but rather a listing of which commercially available enclosures, drives, cables and servers have been tested with a representative Avago controller for this generation of device.

Updated: Jan 30 2015
