

## HFBR-14xxZ and HFBR-24xxZ Series

### Low-Cost, 820-nm Miniature Link Fiber-Optic Components with ST, SMA, SC, and FC Ports

## Description

The Broadcom® 820-nm Miniature Link Series of components are designed to provide cost-effective, high-performance fiber-optic communication links for information systems and industrial applications with link distances of several kilometers. With the HFBR-24x6Z, the 125-MHz analog receiver, data rates of up to 160 Mbaud can be attained.

Transmitters and receivers are directly compatible with popular “industry-standard” connectors: ST, SMA, SC, and FC. They are completely specified with multiple fiber sizes, including 50/125  $\mu\text{m}$ , 62.5/125  $\mu\text{m}$ , 100/140  $\mu\text{m}$ , and 200  $\mu\text{m}$ .

Products are available in various options. For example, transmitters with the improved protection option P show an increased ESD resistance to the pins. This HFBR-141xPxZ integrated solution is realized by including a Zener diode parallel to the LED.

The HFBR-14x4Z high-power transmitter and the HFBR-24x6Z 125-MHz receiver pair up to provide a duplex solution optimized for 100BASE-SX. 100BASE-SX is a Fast Ethernet Standard (100 Mb/s) at 850 nm on multimode fiber.

Evaluation kits are available for ST products, including transmitter, receiver, eval board, and technical literature.

## Features

- RoHS compliant
- Low-cost transmitters and receivers
- Choice of ST, SMA, SC, or FC ports
- 820-nm wavelength technology
- Signal rates up to 160 Mbaud
- Link distances up to several kilometers
- Compatible with 50/125- $\mu\text{m}$ , 62.5/125- $\mu\text{m}$ , 100/140- $\mu\text{m}$ , and 200- $\mu\text{m}$  plastic-clad silica (PCS) fiber
- Repeatable ST connections within 0.2 dB typical
- Unique optical port design for efficient coupling
- Pick and place, and wave solderable
- No board-mounting hardware required
- Wide operating temperature range  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Conductive port option

## Applications

- 100BASE-SX Fast Ethernet on 850 nm
- Media/fiber conversion, switches, routers, hubs, and NICs on 100BASE-SX
- Local area networks
- Computer-to-peripheral links and computer monitor links
- Digital cross connect links
- Central office switch/PBX links
- Video links
- Modems and multiplexers
- Suitable for Tempest systems
- Industrial control links

## Link Selection Guide

For additional information about specific links, see the individual link descriptions. The HFBR-1415Z can be used for increased power budget or for lower driving current for the same data rates and link distances.

Data Rate (Mbaud) <sup>a</sup>	Distance (m)	Transmitter	Receiver	Fiber Size (μm)	Evaluation Kit
DC to 5	1500	HFBR-14x2Z	HFBR-24x2Z	62.5/125	HFBR-0410Z
DC to 50	2000	HFBR-14x4Z/14x5Z	AFBR-24x8xZ	62.5/125	AFBR-0549Z
0.1 to 50	1000	HFBR-14x4Z/14x5Z	AFBR-24x9xZ	62.5/125	AFBR-0550Z

- a. The data rate range in the table refers to the evaluation kit documentation. For an analog receiver, such as the HFBR-24x6Z, the data rate range depends on the receiver circuit used.

## Options

In addition to the various port styles available for the HFBR-0400Z series products, there are also several extra options that can be ordered. To order an option, simply place the corresponding option number at the end of the part number. See [Available Options](#) for available options.

### Option P (Protection Improved Option)

- Designed to withstand higher electrostatic discharge (ESD) to the pins (Class 1C, HBM)

### Option T (Threaded Port Option)

- Allows ST style port components to be panel mounted
- Compatible with all current makes of ST multimode connectors
- Mechanical dimensions are compliant with MIL-STD-83522/13
- Maximum wall thickness when using nuts and washers from the HFBR-4411Z hardware kit is 2.8 mm (0.11 in.)
- Available on all ST ports

### Option C (Conductive Port Receiver Option)

- Designed to withstand electrostatic discharge (ESD) of 25 kV to the optical port
- Significantly reduces the effect of electromagnetic interference (EMI) on receiver sensitivity
- Allows the designer to separate the signal and conductive port grounds
- Recommended for use in noisy environments
- Available on threaded ST port style receivers only
- The conductive port is connected to Pins 1, 4, 5, and 8 through the Port Grounding Path Insert

### Option M (Metal Port Option)

- Nickel-plated aluminum connector receptacle
- Designed to withstand electrostatic discharge (ESD) of 15 kV to the optical port
- Significantly reduces the effect of electromagnetic interference (EMI) on receiver sensitivity
- Allows the designer to separate the signal and metal port grounds
- Recommended for use in very noisy environments
- Available on ST and threaded ST ports
- The metal port is connected to Pins 1, 4, 5, and 8 through the Port Grounding Path Insert

## Applications Support Guide

This section gives the designer information necessary to use the 820-nm Miniature Link Series components to make a functional optical transmission link.

Broadcom offers evaluation kits for hands-on experience with fiber-optic products as well as a wide range of application notes complete with circuit diagrams and board layouts.

Furthermore, the Broadcom application support group is always ready to assist with any design consideration.

## Application Literature

Title	Description
Application Note 1065	Complete Solutions for IEEE 802.5J Fiberoptic Token Ring
Application Note 1121	DC to 32 Mbaud Fiberoptic Solutions
Application Note 1122	2 to 70 Mbaud Fiberoptic Solutions
Application Note 1123	20 to 160 Mbaud Fiberoptic Solutions
Application Note 1137	Generic Printed Circuit Layout Rules

## Evaluation Kits

Broadcom offers fiber-optic kits that facilitate a simple means to evaluate and experience our products. These fiber-optic kits contain all the components and tools required for customers to quickly evaluate and access the value of our products within their respective applications.

### HFBR-0410Z ST Evaluation Kit: DC to 5-Mbaud 820-nm Fiber-Optic Eval Kit

Contains the following:

- One HFBR-1412Z transmitter
- One HFBR-2412Z receiver
- Evaluation board
- Related literature

### AFBR-0549Z Evaluation Kit: DC to 50-Mbaud 820-nm Fiber-Optic Eval Kit

Contains the following:

- One HFBR-1414PTZ transmitter
- One AFBR-2418TZ receiver
- Evaluation board
- Related literature

### AFBR-0550Z Evaluation Kit: Up to 50-Mbaud 820-nm Fiber-Optic Eval Kit

Contains the following:

- One HFBR-1414PTZ transmitter
- One AFBR-2419TZ receiver
- Evaluation board
- Related literature

## Package and Handling Information

### Package Information

All transmitters and receivers of the 820-nm Miniature Link Series are housed in a low-cost, dual-inline package that is made of high strength, heat resistant, chemically resistant, and UL 94V-O flame retardant plastic (UL File #E121562). The transmitters are easily identified by the light gray color connector port. The receivers are easily identified by the dark gray color connector port (black color for the conductive port). The package is designed for pick and place and wave soldering, so it is ideal for high volume production applications.

### Handling and Design Information

Each part comes with a protective port cap or plug covering the optics.

**NOTE:** This plastic or rubber port cap is made to protect the optical path during assembly. It is not meant to remain on the part for a long period. These caps/plugs will vary by port style. When soldering, it is advisable to leave the protective cap on the unit to keep the optics clean. Good system performance requires clean port optics and cable ferrules to avoid obstructing the optical path.

Clean compressed air often is sufficient to remove particles of dirt; methanol on a cotton swab also works well.

### Recommended Chemicals for Cleaning and Degreasing 820-nm Miniature Link Products

- Alcohols: methyl, isopropyl, isobutyl
- Aliphatics: hexane, heptane
- Other: soap solution, naphtha

Do not use partially halogenated hydrocarbons (such as 1.1.1 trichloroethane), ketones (such as MEK), acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrrolidone. Broadcom does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

## Mechanical Dimensions – SMA Port (HFBR-x40xZ)

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Mechanical Dimensions – ST Port (HFBR-x41xZ)

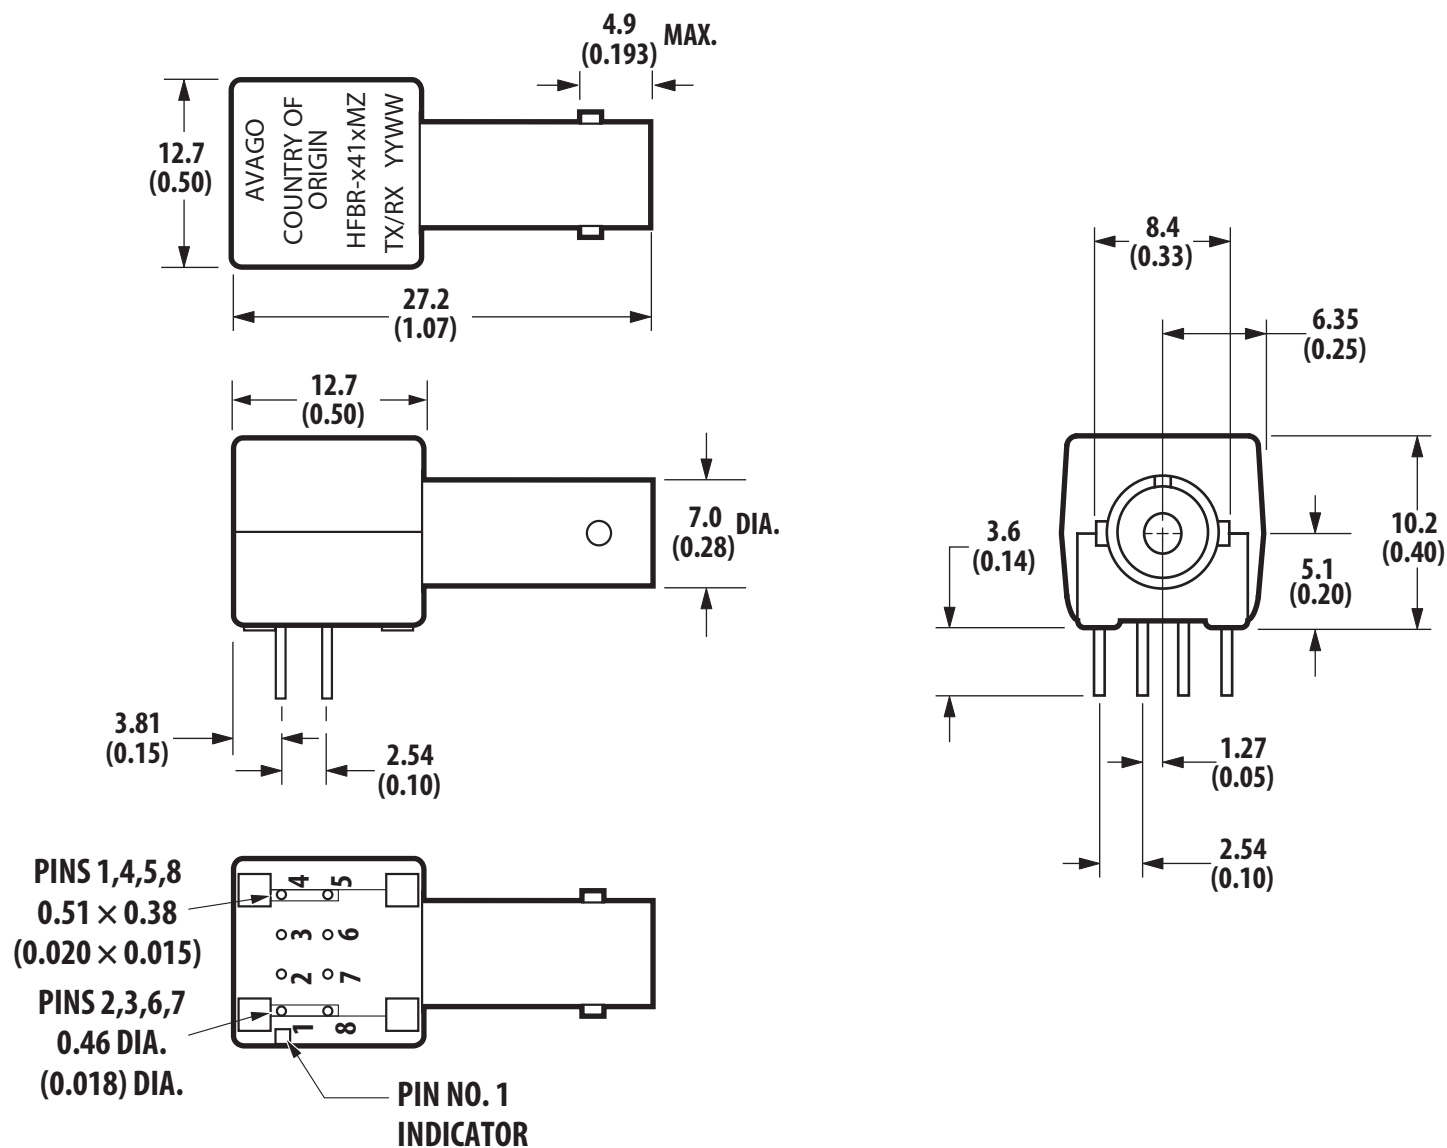

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Mechanical Dimensions – Metal ST Port (HFBR-x41xMZ)

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Mechanical Dimensions – Threaded ST Port (HFBR-x41xTZ)

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Mechanical Dimensions – FC Port (HFBR-x42xZ)

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Mechanical Dimensions – SC Port (HFBR-x4ExZ)

### NOTE:

- Dimensions are in mm (inches).
- A finished hole diameter of at least 1.02 mm (0.04 in.) is recommended for all eight pins to ensure smooth mounting on the PCB.

## Cross-Sectional View

Figure 1: HFBR-x41xTZ ST Series Cross-Sectional View

## Panel Mount Hardware

(Each HFBR-4401Z and HFBR-4411Z kit consists of 100 nuts and 100 washers).

Dimensions are in mm (inches).

## Port Cap Hardware

- HFBR-4402Z: 500 SMA Port Caps
- HFBR-4120Z: 500 ST Port Plugs

## Typical Link Data

The following technical data is taken from a 5-Mbaud and 155-Mbaud link using the 820-nm Miniature Link Series. This data is meant to be regarded as an example of typical link performance for a given design and does not call out any link limitations.

### 5-Mbaud Link (HFBR-14xxZ/24x2Z)

Link performance:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  unless otherwise specified.

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions	Reference
Optical Power Budget with 50/125- $\mu\text{m}$ Fiber	OPB <sub>50</sub>	4.2	9.6	—	dB	HFBR-14x4Z/24x2Z NA = 0.2	Note <sup>a</sup>
Optical Power Budget with 62.5/125- $\mu\text{m}$ Fiber	OPB <sub>62.5</sub>	8.0	15	—	dB	HFBR-14x4Z/24x2Z NA = 0.27	Note <sup>a</sup>
Optical Power Budget with 100/140- $\mu\text{m}$ Fiber	OPB <sub>100</sub>	8.0	15	—	dB	HFBR-14x2Z/24x2Z NA = 0.30	Note <sup>a</sup>
Optical Power Budget with 200- $\mu\text{m}$ Fiber	OPB <sub>200</sub>	13.0	20	—	dB	HFBR-14x2Z/24x2Z NA = 0.37	Note <sup>a</sup>
Data Rate	—	DC	—	5	Mbaud	—	Note <sup>b</sup>
Propagation Delay LOW to HIGH	$t_{\text{PLH}}$	—	72	—	ns	$T_A = +25^{\circ}\text{C}$ , $P_R = -21$ dBm peak, Fiber cable length = 1m	Figures 6, 7, 8
Propagation Delay HIGH to LOW	$t_{\text{PHL}}$	—	46	—	ns		
System Pulse Width Distortion	$t_{\text{PLH}} - t_{\text{PHL}}$	—	26	—	ns		
Bit Error Rate	BER	—	—	$10^{-9}$	—	Data rate < 5 Mbaud, $P_R > -24$ dBm peak	

a. Optical power board at  $T_A = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ,  $V_{\text{CC}} = 5.0V_{\text{dc}}$ ,  $I_F \text{ ON} = 60$  mA.  $P_R = -24$  dBm peak.

b. Data rate limit is based on these assumptions:

- 50% duty factor modulation; for example, Manchester I or BiPhase Manchester II
- Continuous data
- PLL phase lock Loop demodulation
- TTL threshold

## 5-Mbaud Logic Link Design

The resistor  $R_1$  is the only significant element in the drive circuit (see Figure 2) that limits the current through the LED, apart from the gate's output port. Depending on the actual gate used, the voltage drop on the output port  $V_{port}$  could be neglected. The forward voltage value,  $V_F$ , of the LED depends on the desired LED current and on the temperature (see Figure 9). Make sure you take this behavior into account for the calculations.

The curves in Figure 3, Figure 4, and Figure 5 are constructed assuming no inline splice or any additional system loss. Besides fiber attenuation, for correct power budget calculation, make sure you take into account the effect of bending, humidity, ambient temperature, aging and other relevant influences. All these additional losses reduce the achievable link distance accordingly.

For calculating the LED's aging effect, an additional loss of about 1.5 dB is recognized.

The following example illustrates the technique for selecting the appropriate value of  $I_F$  and  $R_1$ :

$$R_1 = \frac{V_{CC} - V_F}{I_F}$$

Maximum distance required = 2000 meters by using HFBR-14x4Z/24x2Z logic link with 62.5/125- $\mu$ m fiber.

Figure 4 shows the “worst-case” drive current of about 43 mA for reaching a distance of about 2000 meters.

Figure 9 shows the transmitter forward voltage of about  $V_F = 1.62$ V. If the typical circuit configuration (Figure 2) is used at  $V_{CC} = 5.0$ V, the resistor value  $R_1$  should be chosen to 78.6 $\Omega$  (3.38V / 43 mA) for reaching driver current of about 43 mA.

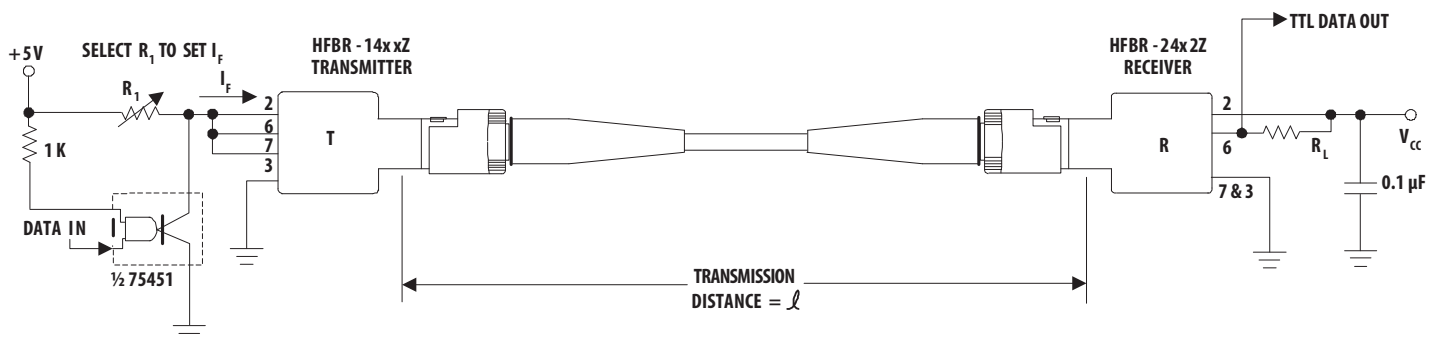

HFBR-14x4Z Output Power Measured Out of 1 Meter of Cable shows the guaranteed HFBR-14x4Z's optical output power limit of -16.0 dBm (for driver current of 60 mA) over the entire temperature range.

Figure 10 shows the normalized typical output power. When the transmitter is driven with 43 mA, the optical output power is about 0.70 or -1.55 dB lower than at 60 mA.

With an assumed fiber attenuation of 3.2 dB/km and the reduced driver current of 43 mA, the minimum optical output power at the fiber end is about -24 dBm, which is equal to the receiver sensitivity over the entire temperature range.

For balancing the individual additional system losses, the driver current must be increased accordingly.

**Figure 2: Typical Circuit Configuration**

**NOTE:** A bypass capacitor (0.01- $\mu$ F to 0.1- $\mu$ m ceramic) must be connected from pin 2 to pin 7 of the receiver. The total lead length between both ends of the capacitor and the pins should not exceed 20 mm.

The following diagrams (Figure 3 to Figure 5) serve as an aid in link design and are based on theoretical calculations. For broad use, no additional effects, such as aging, were taken into account. The additional losses and the individual safety buffer values should be added separately. These diagrams reflect the pure viewing of power budget and do not allow conclusions about the actual link quality.

Overdrive: Maximum optical output power of Tx combined with receiver sensitivity of  $-10$  dBm over the entire temperature range.

Typical 25°C: Typical optical output power of Tx combined with receiver sensitivity of  $-25.4$  dBm at  $T_A = 25^\circ\text{C}$ .

Worst Case: Minimum optical output power of Tx combined with receiver sensitivity of  $-24$  dBm over the entire temperature range.

Figure 3: Typical HFBR-14x4xZ/HFBR-24x2xZ Link with 100/140- $\mu$ m Fiber

Figure 4: Typical HFBR-14x4xZ/HFBR-24x2xZ Link with 62.5/125- $\mu$ m Fiber

Bit Error Rate	BER	—	$10^{-9}$	—	—	Data rate < 100 Mbaud, $P_R > -31$ dBm peak	Note <sup>b</sup>

a. Typical data at  $T_A = +25^\circ\text{C}$ ,  $V_{CC} = 5.0\text{V}_{\text{dc}}$ , PECL serial interface.

b. Typical OPB was determined at a probability of error (BER) of  $10^{-9}$ . Lower probabilities of error can be achieved with short fibers that have less optical loss.

# HFBR-14x2Z/14x4Z/14x5Z Low-Cost High-Speed Transmitters

## Description

The HFBR-14xxZ fiber-optic transmitter contains an 820-nm AlGaAs emitter capable of efficiently launching optical power into four different optical fiber sizes: 50/125- $\mu\text{m}$ , 62.5/125- $\mu\text{m}$ , 100/140- $\mu\text{m}$ , and 200- $\mu\text{m}$  plastic-clad silica (PCS). This allows the designer flexibility in choosing the fiber size. The HFBR-14xxZ is designed to operate with the Broadcom HFBR-24xxZ fiber-optic receivers.

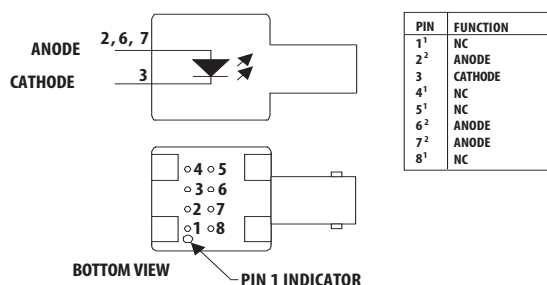

The HFBR-14xxZ transmitter's high coupling efficiency allows the emitter to be driven at low current levels resulting in low power consumption and increased reliability of the transmitter. The HFBR-14x4Z high power transmitter is optimized for small size fiber and typically can launch  $-15.8$  dBm of optical power at 60 mA into 50/125- $\mu\text{m}$  fiber and  $-12$  dBm into 62.5/125- $\mu\text{m}$  fiber. The HFBR-14x2Z standard transmitter typically can launch  $-12$  dBm of optical power at 60 mA into 100/140- $\mu\text{m}$  fiber cable. It is ideal for large size fiber, such as 100/140  $\mu\text{m}$ . The high launched optical power level is useful for systems where star couplers, taps, or inline connectors create large fixed losses.

For 820-nm Miniature Link transmitters with protection improved option "P", a Zener diode parallel to the LED was implemented. Therefore, a higher ESD capability could be attained.

**NOTE:** Parameters "reverse input voltage" and "diode capacitance" for "HFBR-141xPxZ" transmitters deviate from the non-P-parts.

Consistent coupling efficiency is ensured by the double-lens optical system (Figure 1). Power coupled into any of the three fiber types varies less than 5 dB from part to part at a given drive current and temperature. Consistent coupling efficiency reduces receiver dynamic range requirements, which allows for longer link lengths.

## Housed Product

### NOTES:

1. PINS 1, 4, 5, AND 8 ARE ELECTRICALLY CONNECTED.
  2. PINS 2, 6, AND 7 ARE ELECTRICALLY CONNECTED TO THE HEADER.
- To minimize the thermal resistance, the anode trace should be made as large as is consistent with good RF circuit design.

## Regulatory Compliance – Targeted Specifications

Feature	Performance	Reference
Electrostatic Discharge (ESD)	Class 1C (>1000V, <2000V) – Human Body Model	Notes <sup>a, b</sup>
	Class 1B (>500V, <1000V) – Human Body Model	Notes <sup>a, c</sup>

- ESD capability for all pins HBM (Human Body Model) according JEDEC JESD22-A114.
- Only valid for HFBR-141xPxZ (protection improved option).
- Valid for non protection improved transmitter option.

## Absolute Maximum Ratings

Parameter	Symbol	Min.	Max.	Units	Reference

		-17.5	-14.0	-11.6	dBm peak	T <sub>A</sub> = +25°C, I <sub>F</sub> = 100 mA	
		-19.1	—	-11.0	dBm peak	T <sub>A</sub> = -40°C to +85°C, I <sub>F</sub> = 100 mA	
100/140-μm Fiber Cable	PT <sub>100</sub>	-15.0	-12.0	-10	dBm peak	T <sub>A</sub> = +25°C, I <sub>F</sub> = 60 mA	
		-16.0	—	-9.0	dBm peak	T <sub>A</sub> = -40°C to +85°C, I <sub>F</sub> = 60 mA	
		-13.5	-10.0	-7.6	dBm peak	T <sub>A</sub> = +25°C, I <sub>F</sub> = 100 mA	
		-15.1	—	-7.0	dBm peak	T <sub>A</sub> = -40°C to +85°C, I <sub>F</sub> = 100 mA	
200-μm PCS Fiber Cable	P <sub>T200</sub>	-10.0	-7.0	-5.0	dBm peak	T <sub>A</sub> = +25°C, I <sub>F</sub> = 60 mA	
		-11.0	—	-4.0	dBm peak	T <sub>A</sub> = -40°C to +85°C, I <sub>F</sub> = 60 mA	
		-8.5	-5.0	-2.6	dBm peak	T <sub>A</sub> = +25°C, I <sub>F</sub> = 100 mA	
		-10.1	—	-2.0	dBm peak	T <sub>A</sub> = -40°C to +85°C, I <sub>F</sub> = 100 mA	

- P<sub>T</sub> is measured with a large area detector at the end of 1 meter of mode stripped cable, with an ST precision ceramic ferrule (MILSTD-83522/13) for HFBR-141xZ, and with an SMA 905 precision ceramic ferrule for HFBR-140xZ.
- When changing mW to dBm, the optical power is referenced to 1 mW. Optical Power P(dBm) = 10log (P(mW) / 1 mW).
- Fiber NA is measured at the end of 2 meters of mode stripped fiber, using the far-field pattern. NA is defined as the sine of the half angle, determined at 5% of the peak intensity point. When using other manufacturer's fiber cable, results will vary due to differing NA values and specification methods.

**CAUTION!** The small junction sizes inherent to the design of these components increase the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.

## HFBR-24x2Z Low-Cost 5-Mbaud Receiver

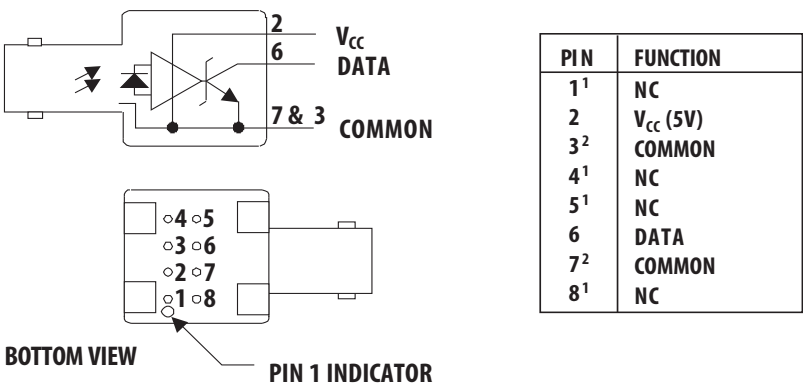

### Description

The HFBR-24x2Z fiber-optic receiver is designed to operate with the Broadcom HFBR-14xxZ fiber-optic transmitter and 50/125- $\mu\text{m}$ , 62.5/125- $\mu\text{m}$ , 100/140- $\mu\text{m}$ , and 200- $\mu\text{m}$  plastic-clad silica (PCS) fiber-optic cable. Consistent coupling into the receiver is ensured by the lensed optical system (Figure 1). The response does not vary with fiber size  $\leq 0.100\text{ }\mu\text{m}$ .

The HFBR-24x2Z receiver incorporates an integrated photo IC containing a photodetector and dc amplifier driving an open-collector Schottky output transistor. The HFBR-24x2Z is designed for direct interfacing to popular logic families. The absence of an internal pull-up resistor allows the open-collector output to be used with logic families such as CMOS requiring voltage excursions much higher than  $V_{CC}$ .

Both the open-collector Data output Pin 6 and  $V_{CC}$  Pin 2 are referenced to Com Pins 3 and 7. The Data output allows busing, strobing and wired OR circuit configurations. The transmitter is designed to operate from a single +5V supply. It is essential that a bypass capacitor (100 nF ceramic) be connected from Pin 2 ( $V_{CC}$ ) to Pin 3 (circuit common) of the receiver.

### Housed Product

- NOTES:
1. PINS 1, 4, 5, AND 8 ARE ELECTRICALLY CONNECTED.
  2. PINS 3 AND 7 ARE ELECTRICALLY CONNECTED TO THE HEADER.

		–24.0 4.0	—	–10.0 100	dBm peak $\mu\text{W}$ peak	$T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$ , $I_{OL} = 8\text{ mA}$	
Propagation Delay LOW to HIGH	$t_{PLHR}$	—	65	—	ns	$T_A = +25^\circ\text{C}$ ,	Note <sup>c</sup>
Propagation Delay HIGH to LOW	$t_{PHLR}$	—	49	—	ns	$P_R = -21\text{ dBm}$ , Data Rate = 5 Mbaud	

a. Typical data at  $T_A = +25^\circ\text{C}$ ,  $V_{CC} = 5.0\text{VDC}$ .

b. Measured at the end of 100/140- $\mu\text{m}$  fiber-optic cable with large area detector.

c. Propagation delay through the system is the result of several sequentially occurring phenomena. Consequently, it is a combination of data-rate-limiting effects and of transmission-time effects. Because of this, the data-rate limit of the system must be described in terms of time differentials between delays imposed on falling and rising edges. As the cable length is increased, the propagation delays increase at 5 ns per meter of length. Data rate, as limited by pulse width distortion, is not affected by increasing cable length if the optical power level at the receiver is maintained.

**CAUTION!** The small junction sizes inherent to the design of these components increase the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.

# HFBR-24x6Z Low-Cost 125-MHz Receiver

## Description

The HFBR-24x6Z fiber-optic receiver is designed to operate with the Broadcom HFBR-14xxZ fiber-optic transmitters and 50/125- $\mu\text{m}$ , 62.5/125- $\mu\text{m}$ , 100/140- $\mu\text{m}$ , and 200- $\mu\text{m}$  plastic-clad silica (PCS) fiber-optic cable. Consistent coupling into the receiver is ensured by the lensed optical system (Figure 1). The response does not vary with fiber size for core diameters of 100  $\mu\text{m}$  or less.

The receiver output is an analog signal which allows follow-on circuitry to be optimized for a variety of distance/data rate requirements. Low-cost external components can be used to convert the analog output to logic compatible signal levels for various data formats and data rates up to 175 Mbaud. This distance/data rate trade-off results in increased optical power budget at lower data rates, which can be used for additional distance or splices.

The HFBR-24x6Z receiver contains a PIN photodiode and low noise transimpedance preamplifier integrated circuit. The HFBR-24x6Z receives an optical signal and converts it to an analog voltage. The output is a buffered emitter follower. Because the signal amplitude from the HFBR-24x6Z receiver is much larger than from a simple PIN photodiode, it is less susceptible to EMI, especially at high signaling rates. For very noisy environments, the conductive or metal port option is recommended. A receiver dynamic range of 23 dB over temperature is achievable, assuming a bit error rate (BER) of  $10^{-9}$ .

The frequency response is typically DC to 125 MHz. Although the HFBR-24x6Z is an analog receiver, it is compatible with digital systems.

Figure 14 shows the recommended AC-coupled receiver circuit. A 10 $\Omega$  resistor must be connected between pin 6 and the power supply, and a 100-nF ceramic bypass capacitor must be connected between the power supply and ground. In addition, pin 6 should be filtered to protect the receiver from noisy host systems. Refer to Application Note 1065 for details.

Power Supply Current	$I_{EE}$	—	9	15	mA	$R_{LOAD} = 510\Omega$	
Equivalent NA	NA	—	0.35	—	—	—	
Equivalent Diameter	D	—	324	—	μm	—	Note <sup>f</sup>

a. Typical specifications are for operation at  $T_A = +25^\circ\text{C}$  and  $V_{CC} = +5\text{V DC}$ .

b. For 200-μm PCS fibers, typical responsivity will be 6 mV/mW. Other parameters will change as well.

c. Pin #2 should be AC-coupled to a load 510Ω. Load capacitance must be less than 5 pF.

d. Measured with a 3-pole Bessel filter with a 75-MHz, –3-dB bandwidth.

e. Overdrive is defined at PWD = 2.5 ns.

f. D is the effective diameter of the detector image on the plane of the fiber face. The numerical value is the product of the actual detector diameter and the lens magnification.

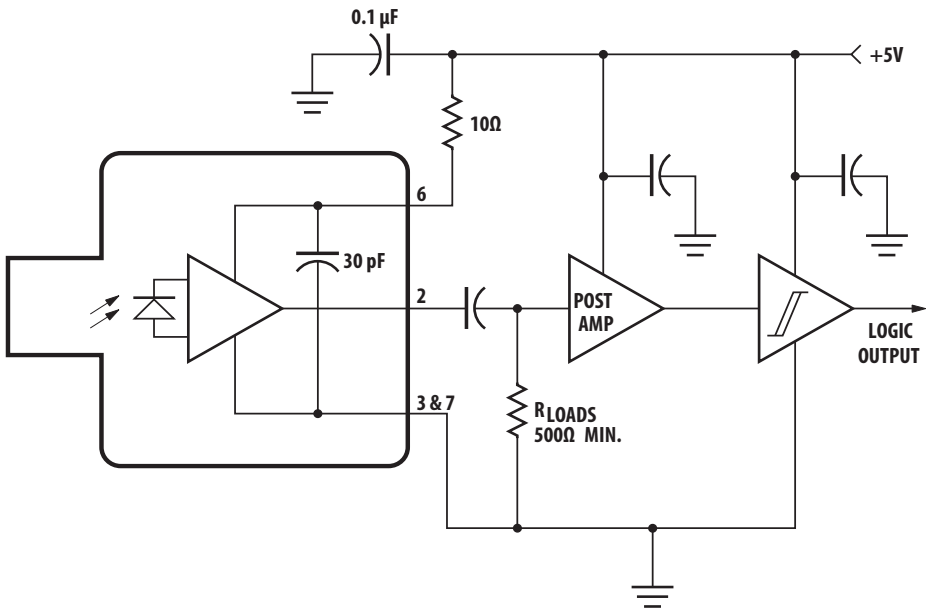

Dynamic Characteristics

−40°C to +85°C; 4.75V ≤ Supply Voltage ≤ 5.25V; R<sub>LOAD</sub> = 511Ω, C<sub>LOAD</sub> = 5 pF, unless otherwise specified.

Parameter	Symbol	Min.	Typ. <sup>a</sup>	Max.	Units	Conditions	Reference
Rise/Fall Time 10% to 90%	t <sub>r</sub> , t <sub>f</sub>	—	3.3	6.3	ns	P <sub>R</sub> = 100 μW peak	<a href="#">Figure 17</a>
Pulse Width Distortion	PWD	—	0.4	2.5	ns	P <sub>R</sub> = 150 μW peak	<a href="#">Note <sup>b</sup></a> <a href="#">Figure 16</a>
Overshoot	—	—	2	—	%	P <sub>R</sub> = 5 μW peak, t <sub>r</sub> = 1.5 ns	<a href="#">Note <sup>c</sup></a>
Bandwidth (Electrical)	BW	—	125	—	MHz	−3 dB Electrical	
Bandwidth – Rise Time Product	—	—	0.41	—	Hz × s	—	<a href="#">Note <sup>d</sup></a>

- a. Typical specifications are for operation at T<sub>A</sub> = +25°C and V<sub>CC</sub> = +5V DC.
- b. Measured with a 10-ns pulse width, 50% duty cycle, at the 50% amplitude point of the waveform.
- c. Percent overshoot is defined as shown in the following equation:  
$$\left(\frac{V_{PK} - V_{100\%}}{V_{100\%}}\right) \times 100\%$$
- d. The conversion factor for the rise time to bandwidth is 0.41 because the HFBR-24x6Z has a second order bandwidth limiting characteristic.
