

DAF Trucks N.V. Runs 70% of their Core Business Systems on IDMS

DAF Trucks N.V. is a technology company and the premier commercial vehicle manufacturer in Europe. DAF is a wholly-owned subsidiary of PACCAR Inc., the global technology leader in the design and manufacturing of premium quality light, medium, and heavy-duty commercial vehicles.

Challenge

The trucking and goods transportation industry requires efficiency, timeliness, and cost control. DAF Trucks N.V. has been able to excel for decades by staying focused on making their IT and mainframe environments highly resilient, secure, and cost efficient.

Solution

For over 30 years, DAF Trucks N.V. has experienced significant benefits from using the Broadcom® IDMS database platform, leveraging its consistent reliability, performance, and customer support. The company particularly values IDMS' continuous availability, performance, modernization, and security features, which ultimately help to reduce costs, address staffing shortages, and make efficient use of system resources compared to other mainframe database management systems.

Outcomes

According to a recent survey of IDMS customers*, DAF Trucks reported relying heavily on the Broadcom IDMS database platform. In fact, IDMS supports around 90% of their mission-critical systems and applications, and about 70% of their core business. They experience high efficiency with IDMS, for example, by processing significant amounts of web transactions using one of the many available integration interfaces, as well as other proven capabilities of Broadcom Mainframe Software solutions.

According to the survey, the level of system resources (address space, virtual memory, DASD) required to run the IDMS system is around 75% less than other similar platforms.

All within DAF Trucks N.V., **70% of our core business relies on IDMS**, including purchasing, HR, logistics, manufacturing, and sales.
