

Kelverion

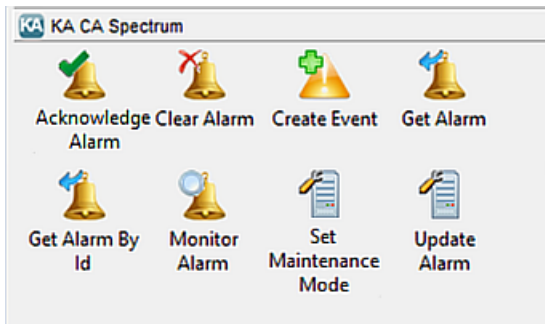

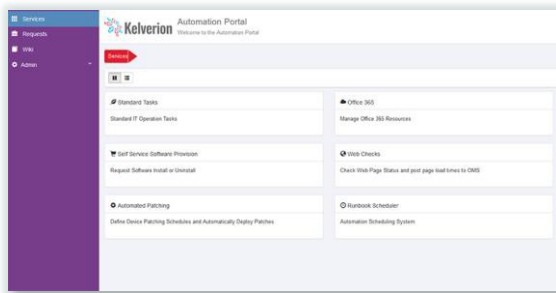

Automation for DX NetOps Spectrum

Integration and Automation for Broadcom's DX NetOps Spectrum

The Kelverion Automation Suite integrates Broadcom's DX NetOps Spectrum (formerly CA Spectrum) Technology into the other enterprise management tools used in your business, to enable the automation of Alarms directly from Spectrum.

The suite uses the Microsoft System Center Orchestrator platform to integrate DX NetOps Spectrum into your System Center systems and to orchestrate DX NetOps Spectrum and your other third party systems to automate the day to day manual processes, which hinder and delay IT. Kelverion provides a range of integrations and ready built solutions to help automate Alarm detection and processing, as well as providing a framework to automate any manual process.

Automation and Integration

The suite offers ready built automation solutions for DX NetOps Spectrum;

- Alarm to Service Desk Incident
- CMDB Population
- Remote Diagnostics and Remediation

DX NetOps Spectrum

The Kelverion integration for System Center Orchestrator provides pre-defined integration and automation capabilities associated with DX NetOps Spectrum including monitoring, creating and updating alarms.

The Integration Pack delivers a range of re-usable objects to automate IT-Functions such as:

Automated Diagnostics - Automate the monitoring of Spectrum for new Alarms, automate the raising of Incident Tickets in your Service Desk and then conduct first level diagnostics

Manager of Managers – consolidate disparate event management streams into a single event management tool to provide a single pane of glass view.

CMDB Population – use the Asset information contained in Spectrum to automatically populate your Service Desk CMDB.

Systems Integration

The suite provides 30+ integrations to other enterprise systems such as;

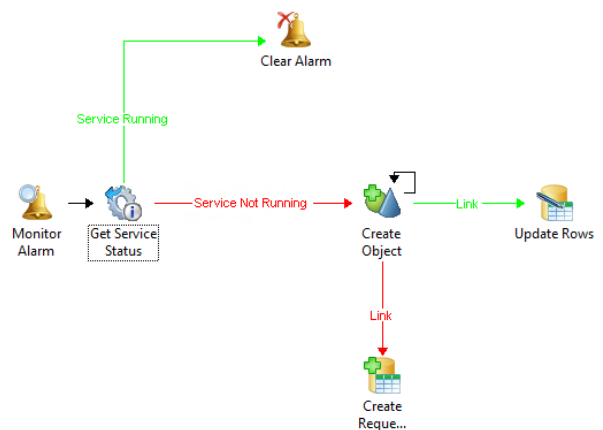

- Microsoft SCCM
- Microsoft SCOM
- BMC TrueSight
- Nagios XI
- SolarWinds
- Atlassian Jira
- BMC Remedy ARS
- CA Service Desk Manager
- ServiceNow
- SQL Server & Oracle

Reduce Process Cycle Time & Decrease Errors

Tasks no longer need to wait for different teams to perform manual actions, therefore increasing agility and eliminating bottlenecks. Automation performs a task the same way every time, which unlike manual fulfilment, reduces the risk of human error within your infrastructure.

Automation Suite Benefits

- Cost savings
- Free up IT resource
- Significantly reduce process cycle time
- Removes process lags / delays
- Increase compliance
