

## PRODUCT BRIEF

### AT A GLANCE

Symantec® Identity Governance and Administration automates and streamlines identity management and governance with a new flexible delivery model, migration utility, and enhanced reporting—helping organizations reduce complexity and future-proof their identity security.

### KEY BENEFITS

- Increase flexibility by deploying on your preferred Linux distribution or cloud platform
- Protect past investments with automated migration that preserves customizations
- Improve compliance with enhanced reporting and stronger audit capabilities
- Reduce costs with simplified deployment, upgrades, and lifecycle management
- Future-proof identity governance with a model designed for hybrid and cloud IT

### KEY FEATURES

- Bring-your-own-Linux model
- Migration utility
- New reporting
- Streamlined deployment and lifecycle management

# Identity Governance and Administration

## What's New in IGA 15.0

### Overview

Managing user identities and access in today's hybrid IT environments is more complex than ever. Organizations must balance agility, compliance, and security while delivering seamless user access to applications, systems, and data. Identity Governance and Administration (IGA) 15.0 introduces a modernized delivery model and powerful new features that give enterprises more flexibility, faster migration, and deeper visibility to help address the following challenges:

- **Flexible Deployment Model:** IGA eliminates rigid, appliance-based limitations, enabling rapid integration across on-premises, cloud, and hybrid environments for true IT alignment.
- **Automated Migration Tools:** IGA replaces manual, resource-intensive upgrades with streamlined, automated transitions that safeguard settings and minimize business disruption.
- **Enhanced Reporting and Analytics:** IGA overcomes limited oversight by delivering actionable dashboards and comprehensive auditing for improved regulatory compliance and risk management.
- **Automated Lifecycle Management:** IGA reduces high administrative overhead by automating installation, patching, and upgrades to deliver lower costs and minimal service interruptions.

### Bring-Your-Own-Linux Model

Deploy on your terms. IGA 15.0 introduces a new bring-your-own-Linux delivery option that offers more control and flexibility than previous locked virtual appliances.

- Deploy on-premises or across cloud platforms such as Azure, AWS, GCP, and GCVE.
- Align deployments with enterprise patching, monitoring, and compliance standards.
- Reduce lock-in while maintaining the preconfigured efficiency of appliances.

### Migration Utility

Upgrading doesn't have to be disruptive. Transitioning to IGA 15.0 is easier than ever with the new Migration utility.

- Automate upgrade steps to minimize manual effort and errors.
- Preserve existing configurations, policies, and customizations.
- Accelerate time-to-value by reducing migration disruption.

**CHOOSE IGA 15.0 FOR  
SUPERIOR DEPLOYMENT  
FLEXIBILITY, EFFICIENT  
OPERATIONS, DEEP  
VISIBILITY, AND  
ROBUST SECURITY  
MANAGEMENT ALIGNED  
TO ENTERPRISE NEEDS**

## New Reporting Solution

Identity governance isn't just about control—it's also about visibility. IGA 15.0 now utilizes JasperReport Libraries to streamline your reporting experience.

- Provides all of the OOTB reports and flexibility of custom reports without requiring a dedicated JasperReport Server.
- Allows existing customers to see previous OOTB reports with no additional configuration
- Enables customers to design custom reports with JasperReports Library, or migrate existing custom reports as necessary

## Streamlined Deployment and Lifecycle Management

Reduce costs and accelerate time-to-value. With IGA 15.0, deployment and operations are faster and more efficient.

- Install rapidly on Linux or cloud platforms.
- Simplify upgrades and patching with automated lifecycle management.
- Lower administrative overhead and speed up time-to-value.

## Summary

IGA 15.0 delivers modern identity governance tailored for today's enterprise IT by removing deployment barriers and offering flexible, future-ready integration across hybrid and cloud environments. Rapid migration tools simplify upgrades and safeguard existing investments, enabling seamless transitions with minimal operational disruption. Enhanced reporting and analytics provide organizations with actionable insights and real-time compliance intelligence to strengthen audit and governance at every stage.

Designed to adapt with evolving IT practices, IGA 15.0 streamlines installation, upgrades, and patches with automated lifecycle management, cutting operational costs and accelerating time-to-value. Choose IGA 15.0 for superior deployment flexibility, efficient operations, deep visibility, and robust security management aligned to enterprise needs.
