Symantec® Endpoint Security Complete

The Benefits of Upgrading Your Endpoint Solution Today

Why Upgrade?

For customers in the process of upgrading or renewing, this document explains the value of the most awarded Symantec Endpoint Security (SES) Complete solution, delivering the most complete and integrated endpoint security platform to protect all your traditional and mobile endpoints. SES Complete combines all of Symantec’s endpoint security technology including SEP, EDR, Mobile Threat Defense, Active Directory Defense, Adaptive Protection, App Control, and Threat Hunting – all in one package and one price. SES Complete is delivered with a single agent per OS, vastly simplifying deployment and can be managed on-prem, in the cloud, or hybrid. Most new features strengthen SES Complete, and some apply to SES Enterprise.

SES Complete Benefits

1. Industry-leading solution that addresses threats across the entire attack chain.
2. Highest ROI with easy deployment and management as a single-agent solution combining many innovative security layers all in one.
3. Protection for corporate and remote employees by supporting all devices and Operating Systems with on-prem, cloud, or hybrid management.
4. Latest security features and technology innovations are available at no extra cost.

Symantec
A Division of Broadcom
Best Protection

SES Complete delivers an industry-leading solution that addresses threats across the entire attack chain.

- Attack Surface Reduction
- Attack Prevention
- Breach Prevention
- Detection and Response

Other solutions only may focus on a portion of the attack chain (i.e. detection and response), leading to too many alerts and false positives. Prevention also is important. By stopping attacks at the beginning, there will be fewer attacks and alerts. Symantec’s integration of all SES Complete security engines gives a better view of threats across all layers. And Symantec’s largest customer base helps deliver the most complete set of analytics, resulting in better detection and prevention. To top it off, Symantec’s Global Intelligence Network allows sharing of intelligence across product pillars, so that knowledge gained from network security and information security can be used to bolster SES Complete’s prevention, detection, and response capabilities.

Best Value

SES Complete delivers the best value through product quality and operational savings. Security is in our DNA as evidenced by many years of endpoint security leadership.

By delivering a single-agent solution, single-console solution, customers enjoy significant operational savings with fast deployment and easy management. There are additional administrative and dollar savings for customers who work with us as a single vendor. This value is validated in this report. Symantec commissioned Forrester Consulting to conduct a Total Economic Impact study, interviewing customers with experience using Symantec Endpoint Security Complete. Symantec’s strong results included a 437% ROI.²

Broadest Infrastructure Coverage

SES Complete delivers complete protection so that you have no blindspots. It secures all your devices (traditional, mobile, and server) and all key Operating Systems (Windows, macOS, Linux, Android, iOS, and more). In addition, whether your management model is on-premises, cloud-based, or a hybrid somewhere in-between, we are on that cloud journey with you to support you every step of the way. Symantec understands your needs because we’ve been protecting enterprises effectively for decades.

Latest Product Innovations

During the subscription term, you have access to key features and architecture changes that enable Maintenance benefits including uninterrupted security protection and ongoing supportability. Latest product innovations keep your product always up-to-date and deliver cutting-edge security features such as Threat Hunter and Behavior Isolation:

- Single agent for attack surface reduction, attack prevention, breach prevention, and Endpoint Detection and Response (EDR)
- Adaptive Protection blocks unused and potentially dangerous app behaviors with minimal operational impact.
- Active Directory Defense blocks attacker lateral movement and stops breaches by protecting Active Directory credentials.
- Threat Hunter is a proactive approach to threat detection. It provides machine learning and analyst inputs to help SOC analysts detect bad actors and malicious activity on your network.
- Integration with third-party applications including Microsoft Graph, Open C2, and other Symantec solutions through Symantec ICDx
