

Automic® Automated System Copy for SAP

Key Benefits

- Accelerate delivery of SAP testing and training systems with self-service provisioning.
- Increase quality and consistency of tests by always using fresh SAP data for test cases.
- Improve compliance with data regulations, such as GDPR, by integrating with data anonymization solutions.
- Reduce operational costs by freeing SAP-skilled staff from mundane and repetitive tasks.

Key Features

- A single point of control allows all copying, slicing, and masking steps to be monitored as a single process from a central console.
- Parallel processing optimizes throughput by running tasks in parallel where possible, dramatically improving pre-copy and post-copy processes.
- Seamlessly integrates with third-party slicing and masking tools to reduce and anonymize non-production data during the copy process.

Overview

Automic® Automated System Copy for SAP is built on the Automic Automation platform and its extensible catalog of adapters. Automic Automated System Copy for SAP provides a high degree of automation for SAP system copies, up to 100% depending on the individual scenario. Automating copies removes latency between steps and eliminates manual operator error. As a result, you get faster, more frequent, and more reliable SAP system copies.

Business Challenges

Today, every business is a digital business. Organizations are undergoing radical transformations as they implement a digital business strategy. Organizations look to align the pace of new digital technology with traditional ERPs and core business applications. As complexity and the speed of change both increase, agile SAP development is emerging as a way to address the need for accelerated and continuous delivery of new features for business.

Most organizations find it difficult and time consuming to provide appropriately masked copies of SAP data for testing or even training activities. This causes delays in the agile development process. The drain on resources, storage, and time required to manage data and to run tests across SAP environments impacts global costs and business success.

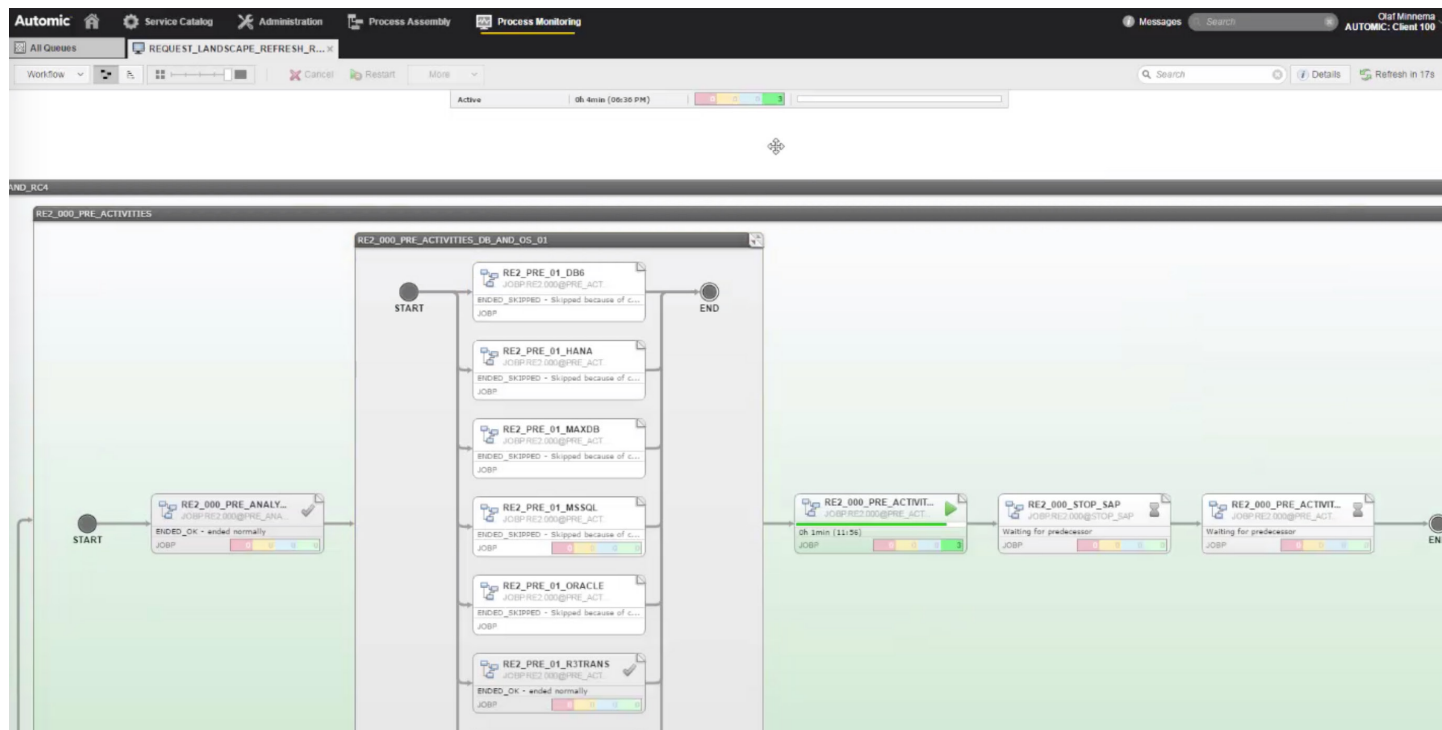

Solutions Overview

Automic Automated System Copy for SAP enables you to automate and optimize SAP system copy processes. Providing a high degree of automation, Automic Automated System Copy for SAP enables SAP system copy processes to run faster and smarter with fewer resources. This efficiency greatly improves processing performance, provides more visibility on the copy process, and ensures that your testing, development, and training systems are not sitting idle.

Automic Automated System Copy for SAP incorporates the three main steps of creating secured and reliable copies for SAP into a fully orchestrated process:

- Pre-processing tasks prepare the target SAP system for receiving the system copy.
- Copy tasks manage the copying of data from the source SAP system to the target.
- Post-processing tasks configure the target system so it is ready for use.
