

Continuous Delivery by CA Technologies

Integrated, zero-touch application delivery from planning to production.

Develop swiftly, test continuously and release reliably with CA's integrated, open, end-to-end continuous delivery ecosystem. See how it all comes together.

Innovation at Speed

In the application economy, delivering an outstanding digital experience across web and mobile applications is critical to business success. Organizations are under tremendous pressure to bring high-quality innovations to market quickly, while reducing risk and cost. An integrated, open, continuous delivery environment that automates the software development lifecycle is key to achieving these goals.

With CA's continuous delivery ecosystem, organizations can:

- **Develop continuously.** Customers have seen “benefits of more than **\$1.0 million per year** in early defect detection savings” through simulated development and testing environments. ¹
- **Test continuously.** Shift-left testing enables customers to see a **25% reduction** in testing cost and time. ²
- **Release continuously.** Automate the process from planning to production up to 20x faster with improved quality and a **98% reduction in defects** seen in production. ³

Accelerate the delivery of innovative, high-quality applications, respond to the marketplace quickly, improve competitive advantage and win in the application economy.

Continuous Delivery by CA Technologies

CA's portfolio is designed to drive efficiency from planning through production. A core component of our continuous delivery portfolio is CA Release Automation, a market-leading application release automation solution that delivers full application deployment automation and release coordination across stages, environments and teams. The solution's analytic capabilities enable DevOps teams to plan, manage, analyze and optimize the continuous delivery pipeline from a single control point. In addition, the portfolio includes CA Agile Central, CA Agile Requirements Designer, CA Service Virtualization and CA Test Data Manager. We continue to invest in and enhance the portfolio, most recently via the acquisition of BlazeMeter, an innovative, SaaS-based performance and load-testing solution. CA BlazeMeter® enables teams to shift performance testing left, helping to increase test coverage and surface problems much earlier in the development cycle—increasing product quality and speeding up the deployment process.

The full portfolio is represented in the diagram below, along with the ecosystem of third-party systems that integrate with CA solutions.

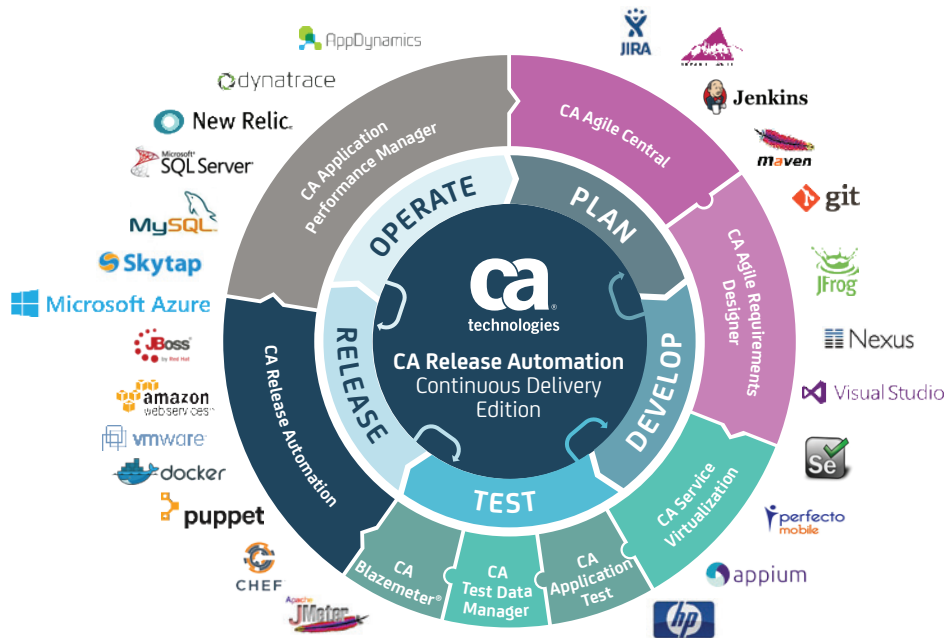

Figure 1: The CA continuous delivery solutions portfolio.

Integration in Action: See it Live

The products in CA's portfolio work together in a cohesive fashion, enabling development teams to seamlessly progress an application from planning to production. View the [demo](#).

Summary

As a leader in continuous delivery, CA is the only company capable of providing an end-to-end continuous delivery solution as seen in the demonstration. The CA continuous delivery solution can help you evolve into a truly modern software factory to significantly improve release cycle times, product quality and application performance. For more information about any of the products shown in the demonstration referenced above, please contact your account representative, or check us out at ca.com/continuousdelivery.

CA Technologies (NASDAQ: CA) creates software that fuels transformation for companies and enables them to seize the opportunities of the application economy. Software is at the heart of every business, in every industry. From planning to development to management and security, CA is working with companies worldwide to change the way we live, transact and communicate—across mobile, private and public cloud, distributed and mainframe environments.
