

# Symantec Data Loss Prevention for Box

*Enables a secure, compliant, and easy cloud file sharing solution for your company*

Keeping corporate information safe and compliant has never been easy. Cloud and mobile devices have introduced a whole new set of data protection challenges. Employees expect the ability to store and share information in the cloud—and then access that information anywhere. Users typically adopt their favorite cloud storage service if corporate IT cannot provide file sharing options that are convenient and familiar. This “shadow IT” approach leaves you with little visibility and even less control, which compromises compliance and puts your information at risk.

Symantec solves this problem with a solution that seamlessly integrates advanced Data Loss Prevention (DLP) capabilities into Box. This makes it possible for IT organizations to discover and control the sensitive corporate information people store and share on Box. It also gives users a familiar, convenient, and safe cloud storage option they can use to store and share files without putting sensitive data at risk.

## Discover and Protect Valuable Information

Symantec DLP for Box brings a complete range of enterprise DLP capabilities to corporate Box accounts.

**Scan user accounts** to discover what data is being stored, how it's being used, and who is sharing it. Symantec DLP for Box quickly and automatically detects all of the sensitive data stored in your employees' Box accounts, determines whether it's being shared with people outside the company, and identifies problematic sharing practices, such as “accessible to all” links to sensitive information or the lack of password protection.

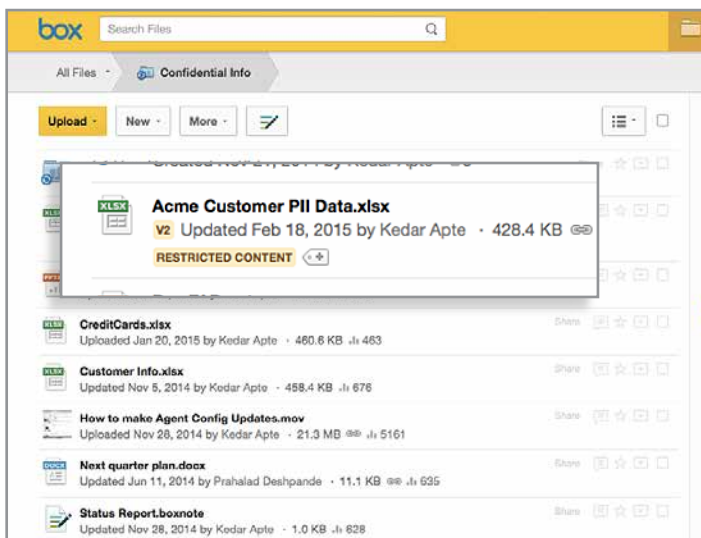

**Control the use of confidential files** using advanced content detection methods and your own DLP policies. With Symantec DLP for Box, you can apply existing policies to files stored on Box—and then quickly take appropriate actions to remediate policy violations and maintain compliance.

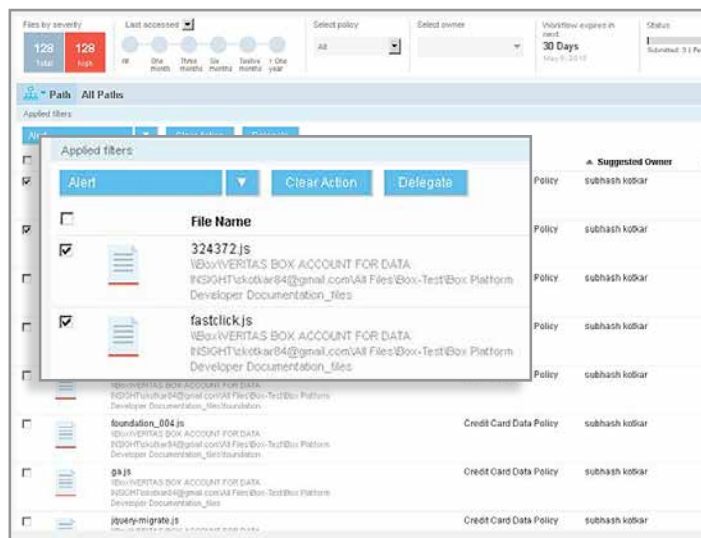

**Actively motivate users to self-remediate** by placing visual tags on Box files, sending notification emails automatically, and enabling them to review incidents using a convenient self-service portal.

# Symantec Data Loss Prevention for Box

Symantec DLP for Box adds clear visual tags to files to let users know when they contain sensitive or restricted content.

A convenient self-serve remediation portal makes it easy for content owners to resolve DLP policy violations and keep sensitive corporate information safe and compliant.

## Flexible Deployment Options

Depending on your requirements, you can choose to deploy Symantec DLP for Box as an on-premise or cloud-based solution. In either case, your existing Symantec DLP Enforce Platform works with the DLP Cloud Discover Detection server to scan Box documents and accounts, apply DLP policies, and initiate appropriate remediation actions.

## Work With a DLP Partner You Can Trust

Symantec is an established leader in the DLP market and a founding partner in the Box Trust program. That means you can count on Symantec to deliver proven DLP methodologies, intuitive policy and incident management tools, and comprehensive DLP coverage as you work to extend security and compliance to Box.
