

Datacom® Systems REST API and Health Check Analyzer™

“Learn valuable insights, best practices, standards and recommendations for your Datacom/DB and Datacom/AD environments with a click of button using a modern web application for a comprehensive and adaptable health check analysis.”

What can the Datacom Health Check Analyzer do?

- Uses the Datacom Systems REST API to connect to the Multi-User Facility (MUF) to retrieve data from the dynamic system tables (DSTs).
- Analyzes & compares against pre-loaded best practice rules & performance recommendations.
- Visualize data or export in CSV format to use with familiar tools, like Microsoft Excel.

How much does Datacom Health Analyzer cost?

This is a no additional charge for licensed Datacom/DB 15.1 or Datacom/AD 15.1 customers

Simplifies Ongoing Health Checks and Performance Analysis Automatically

Automates the health check analysis and environment reviews performed manually by Technical Staff.

Enable both new and experienced DBAs with the tools to improve and sustain your Datacom environment for operational stability.

Generate health check reports on-demand with a single mouse-click.

Getting started today:

- **Download** Datacom Systems REST API and the Datacom Health Check Analyzer.
- Participate in a no-charge **Embrace Open Workshop** to onboard you through installation and demonstrations.

Security

Mainframe security credentials required to access data.

100%

Platform Flexibility

Installable on either Windows, Mac, or Mainframe USS environments.

“Embrace Open allows you to extend your mainframe value further into the enterprise and embrace open source to facilitate user-developed interfaces, dashboards, integrate with modern tooling, and integrate with third party applications. Our goals are to provide you with the ability to leverage modern accesses to your existing investments and promote avenues for deeper integration and opportunity for new application growth.”
