Quotes from Member Reviews

We asked business professionals to review the solutions they use. Here are some excerpts of what they said.

Video Review from a Real User

Vijay A.
Principal Architect at a tech services company

What I felt was when we reviewed it along with the multiple other vendors in the market was that the operational side of API Management is pretty simple, so that we can ramp it up very fast in our organization. The way the product is built was really good.

Most Valuable Feature Is Security Along With Performance And Scalability.

Valuabe Features

The most valuable feature is security, which is the most important to our company. Then comes performance, scalability, and I see tremendous performance value without compromising the security. It gives us peace of mind, for example there are so many penetration attacks happening, DDoS kind of attacks happen in our API infrastructure if you don't have the security. With the out of the box security features from CA API Management, I can focus on the business logic to deliver the real value to the consumers, without worrying about the security....
