Video Review from a Real User

Steve S.
Director DevOps at a financial services firm

One of the key benefits, what really we're looking at is the quality of the releases, not necessarily the code quality, but the actual deployments and the speed at which we're doing it. Things that we auto-mate are taking upwards of 8 to 10 times less. Now, what we can do is we can do 3 to 4 times more on a release. We just had our largest release ever. Without CA Release Automation, there's no way we could deliver that level of code to our end-customers. It's very stable.

Featured Review

Shweta B. Real User ✓
Tools Administrator at a tech services company

Provides An Agile Solution Based On DevOps Concepts. We Like The Ability To Share Components Across An Enterprise.

Valuable Features

Most importantly, it provides an agile solution that is based on DevOps concepts. This is very good for DevOps teams, and I can say that it is a very helpful feature. Some other features which are used by our organization, includes the migration of process design for the Release Operations Center (ROC), the ability to share components across an enterprise, and integration with Chef Tool.
