

# Maximizing Use and Value for Your CA IDMS™ Software Investment

## Lower costs, optimize resources, improve business service velocity

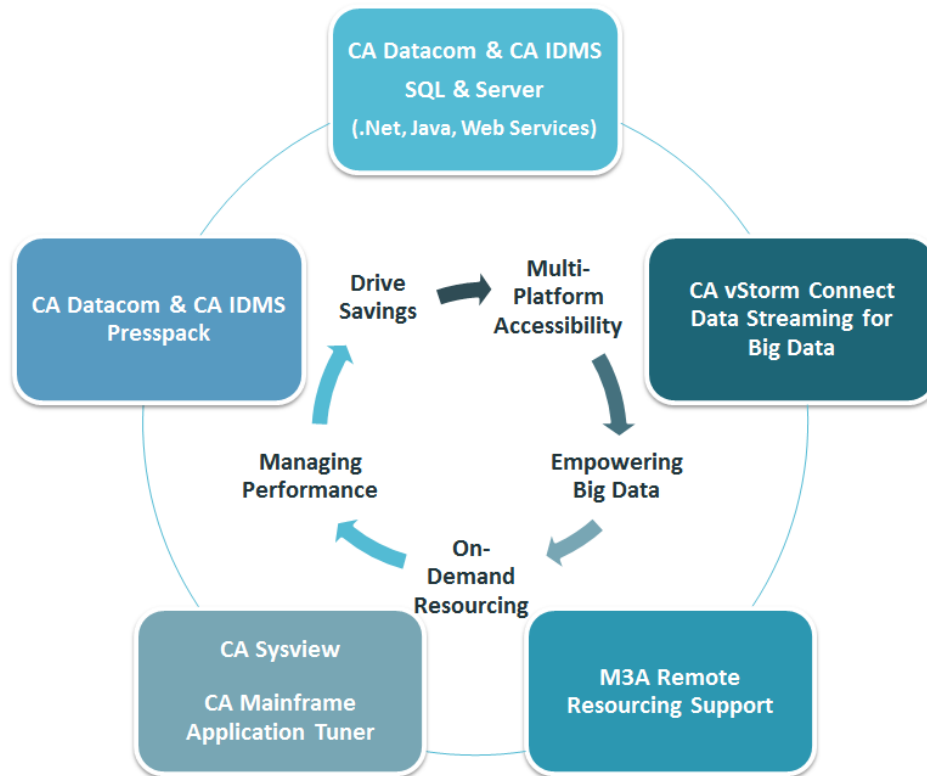

CA Technologies can help you improve your service velocity to your business by delivering cost-effective and reliable database processing by maximizing your use and value for your CA IDMS software investment. We can help you unlock the value of your core business data by making it extensible to mobile apps, perform faster and less costly, accessible to big data projects and sustainable.

## Value

CA can help you **reduce overall costs and risk, while continuing to build business value**\* in any of the following areas:

- **Modernization** - Integration into modern application has become very important for many companies. They need a way to integrate modern apps, Business Intelligence and analytics and Web services into their app portfolio. Our CA IDMS SQL and CA IDMS Server options enable modern development using today's skills.
- **Big Data Integration:** Big Data projects are springing up in increasing numbers. Often, legacy data is NOT included because of a lack of a secure and easy way to integrate. We can help extend the access to CA IDMS data into Big Data.
- **Exploding Storage Requirements:** With organizations' digital information growing exponentially with no end in sight, access to data and system performance becomes a costly challenge. CA IDMS Presspack offers you a way to shrink storage requirements, improve ROI, and not impact CPU cycles.
- **Performance Optimization:** We have found that lack of automation functionality to monitor and measure COBOL and CA IDMS ADS applications running in the CA IDMS environments can help perpetuate problems that you might not be aware of. CA Mainframe Application Tuner optimization allows you to quickly measure application performance and pinpoint problems and delays BEFORE problems arise.
- **Professional Services**— Databases need basic “care and feeding” to ensure well-running critical business systems. If you do not have the required DBA resources, we offer assistance to help Measure, Monitor, Manage and Alert often faster and at less cost than you could do it yourselves.

\* Certain information in this document is based upon CA's experiences with the referenced software product in a variety of development and customer environments. Past performance of the software product in such development and customer environments is not indicative of the future performance of such software product in identical, similar or different environments. CA does not warrant that the software product will operate as specifically set forth in this document. CA will support the referenced product only in accordance with (i) the documentation and specifications provided with the referenced product, and (ii) CA's then-current maintenance and support policy for the referenced product.

## Solutions

Many of our customers tell us they are considering modernization techniques that are designed help to improve performance, scalability, platform support, standards compliance, and usability while simultaneously reducing costs. Learn more about CA's expansive solution portfolio and how you too can achieve your goals to get more years of increased productivity and value from your current CA investment. Key solutions include:

- **CA IDMS M3A Service** - provides integrated service and support necessary for sites relying on CA IDMS for their mission critical, high-performance database processing systems running on IBM z Systems hardware.
- **SQL Web Connect** – provides access to CA IDMS modernization and access capabilities. **Take advantage of it TODAY with a no-cost trial: SQL Web Connect is included in CA IDMS 18.5 and higher.**
- **vStorm Data Connect for Big Data** – helps enable better analytics by providing self-service access to enterprise data. Provides more efficient and faster data movement, while delivering data with the details preserved for better analytics—no staging required.
- **CA Mainframe Application Tuner** - designed to enable performance management teams to more quickly, easily and proactively identify the root causes of application performance inefficiencies in z/OS based systems to improve response times and lower CPU consumption.
- **CA IDMS Presspack** - designed to shrink database data storage requirements by using compression and offload processing to zIIP Speciality Processors.
