

Symantec Technology Partner: Cradlepoint

cradlepoint

Partner Product: Cradlepoint
Partner Product: NetCloud Solution Packages
Symantec Product: Web Security Service

Business Challenge

The pace of change, brought on by digital transformation, is staggering. Businesses of all sizes, and across all industries, have to move and evolve faster than ever before. The penalty for not keeping up is no longer slowing sales—it is no sales.

The traditional enterprise WAN has evolved little over the past 20 years and was not built for the current changing conditions. It has become a significant inhibitor to a company's ability to transform. Branch networks and internal data centers are congested and unable to keep up with the explosion of new applications. Additionally, the traditional enterprise WAN was not designed for mobile locations and IoT.

The partnership between Cradlepoint and Symantec provides a joint solution that enables enterprises to securely offload Internet-bound traffic from congested branch networks and internal data centers and span the Internet to connect everything from kiosks, sensors and cameras to digital signage, vehicles and people.

Combined Benefits

- Protects distributed enterprises from constantly emerging and evolving threats inherent with direct Internet access.
- Addresses the entire enterprise, including traffic flowing to and from branch offices, retail stores, mobile transportation, and IoT machines such as kiosks and digital signage.
- Reduces cost and complexity of the WAN by using lower-cost broadband Internet rather expensive private networks based on MPLS.
- Harnesses 4G-LTE as part of a multi-WAN solution for fixed locations, mobile locations, and IoT machines.
- Provides IT administrators with full application-based policy control and visibility.

Branch Networks

- SD-WAN
- Edge Security
- WLAN

Mobile Networks

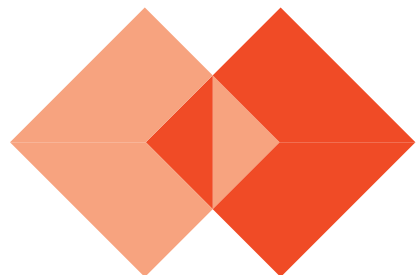

- SD-WAN
- Wi-Fi
- Telematics

IoT Networks

- SD-Perimeter
- M2M
- Edge Compute

Integrated Solution

The powerful combination of Cradlepoint NetCloud Solution Packages and the Symantec Web Security Service enables enterprises to securely connect their people, places and things with evolved WAN and security services.

The Cradlepoint on-premise platform is a cloud-managed router that supports multiple software-defined WANs, including 4G-LTE, WiFi-as-WAN and Ethernet. It is an enterprise-grade solution that includes advanced networking, security and analytics for large enterprise deployments.

Internet-bound traffic from the Cradlepoint router flows directly to the Symantec Web Security Service, which enforces comprehensive internet security and data compliance policies, regardless of location or device.

Digital Transformation of the Enterprise WAN

The powerful combination of Cradlepoint NetCloud Solution Packages and the Symantec Web Security Service enables enterprises to securely connect their people, places and things with evolved WAN and security services.

The solution features highly converged cloud and network infrastructures at the WAN Edge, and the elasticity needed to deliver flexible and instant connection services, and enables enterprises to control access, protect users from threats, and secure their sensitive data.

About Symantec

Symantec Corporation (NASDAQ: SYMC), the world's leading cyber security company, helps organizations, governments and people secure their most important data wherever it lives. Organizations across the world look to Symantec for strategic, integrated solutions to defend against sophisticated attacks across endpoints, cloud and infrastructure. Likewise, a global community of more than 50 million people and families rely on Symantec's Norton and LifeLock product suites to protect their digital lives at home and across their devices. Symantec operates one of the world's largest civilian cyber intelligence networks, allowing it to see and protect against the most advanced threats.
