

TouchDown by Symantec

Secure email for the mobile workforce

Data Sheet: Endpoint Management and Mobility

Challenge

Regardless of industry or company size, the need to secure corporate data on mobile devices is a mission-critical imperative for corporate IT. The most common need for mobile workers is getting access to email, contacts, and calendars on their devices. Some employees, partners, contractors and other non-standard workers do not have access to a corporate-issued phone or tablet and have limited productivity on-the-go. Many native and third-party solutions today require device control to manage email and Personal Information Manager (PIM) apps, and lack the flexibility for BYOD initiatives, the depth of features from desktop email applications, and most importantly, lack essential data security controls.

How Symantec Can Help

TouchDown™ by Symantec™ provides a highly secure container for work email, to separate corporate data from personal data in a truly secure and easy-to-use solution. TouchDown is a full-featured Exchange client with support for Email, Contacts, Calendar, Tasks, and Notes. Since TouchDown stores and encrypts the data on-device and in-transit, if a device is lost or stolen, the app and its data can be wiped separately, rather than wiping the entire device. Additionally since the data is only a copy of what is present on the corporate Exchange server, data loss is not an issue. TouchDown provides a single app for essential email, contacts and calendar for both iOS and Android devices, with the functionality that users want and the security controls that companies require.

Enable BYOD Flexibility

With TouchDown you can protect corporate data and keep employees productive anytime, anywhere with a secure and protected email app for work. TouchDown ensures access to email, contacts, and calendar is not only secure, but flexible to accommodate unmanaged devices.

Key Benefits

- Separate, secure app container with remote wipe capability
- Provides more than 80% of Outlook functionality
- Enterprise-grade security and data protection
- Integrates with MDM platforms
- Support for iOS and Android devices

Why TouchDown

TouchDown is a leading third-party Exchange ActiveSync (EAS) mobile application with over 2 million app downloads on Android and iOS. TouchDown has provided a secure email container for business users since 2008, making it one of the most robust and mature email management solutions in the market today.

Designed for Business Users

TouchDown by Symantec gives employees the freedom they need for collaboration and productivity on-the-go, while providing companies with the data security they require for both corporate managed and personal devices. With a simple touch or swipe, users can access over 80% of Outlook functionality - more than most native apps can provide. For IT, you can require a pin/password, remote wipe the app and its data from the device, and simplify email management across OS devices.

Full-Featured Email App

- Edit, update, and delete emails, appointments, tasks, etc.
- Day/week/month calendar views
- Flag for follow-up
- Access Global Address List Lookup
- Customize notifications
