Symantec Trust
Center Enterprise Account

A number of website security technologies are currently available to help you protect your site, including Secure Sockets Layer (SSL), vulnerability assessment and malware scanning. SSL authenticates websites and encrypts information transmission. Vulnerability assessment identifies potential entry points for security breaches while malware scanning looks for harmful software already on your site and network.

However, without the right solution, the time and cost of managing website security can be high. Organizations may have trouble keeping up with their ever-changing security needs. And, stand-alone technologies purchased separately can be expensive and difficult to maintain.

More Protection Using Fewer IT Resources

Symantec™ Trust Center Enterprise Account helps reduce the complexity of managing website and data security so that you can protect and grow your business without the need for dedicated IT resources. This solution is designed to give you the agility and visibility and control you need for business continuity.

Key Benefits
- Cloud-based console for easy and rapid deployment
- Instant issuance of most SSL certificates on pre-approved domains for prompt response to business needs
- Management of SSL, vulnerability assessment and website malware in a single solution to reduce point products and to offer broader protection
- Centralized management of all Symantec SSL Certificates to improve efficiency and reduce costs
- SSL certificate status reports and notifications help you reduce the risk of unexpected expiration and identify rogue certificates
- A dedicated account manager to meet your unique requirements
- Symantec award-winning technical support helps you resolve technical issues promptly and efficiently

Protect Data in Transit with A Full Range of SSL Certificates

Symantec Trust Center Enterprise Account supports a full range of SSL certificates to meet your unique requirements:
- Server Gated Cryptography - Enable site visitors to experience the strongest encryption possible with their browser
- Extended Validation - Convert prospects to loyal customers and give customers confidence that your site is authentic
- Subject Alternative Names for Unified Communications - Reduce overhead by securing multiple domains
- Wildcard - Increase efficiency by securing multiple subdomains under a root domain, using a single certificate

Inspire Trust And Confidence from Customers And Stakeholders

The Norton™ Secured Seal, the most recognized trust mark on the Internet, inspires the confidence to transact. And Symantec Seal-in-Search™ shows consumers your site is secured by Symantec before they click. Together, Norton Secured Seal and Seal-in-Search help grow business by assuring your customers that they are safe from search, to browse to buy.

This is why Symantec is trusted by 92 of the 100 largest SSL-using banks in the world and 75% of the 500 largest ecommerce sites in North America.
