

Symantec Validation and ID Protection (VIP)

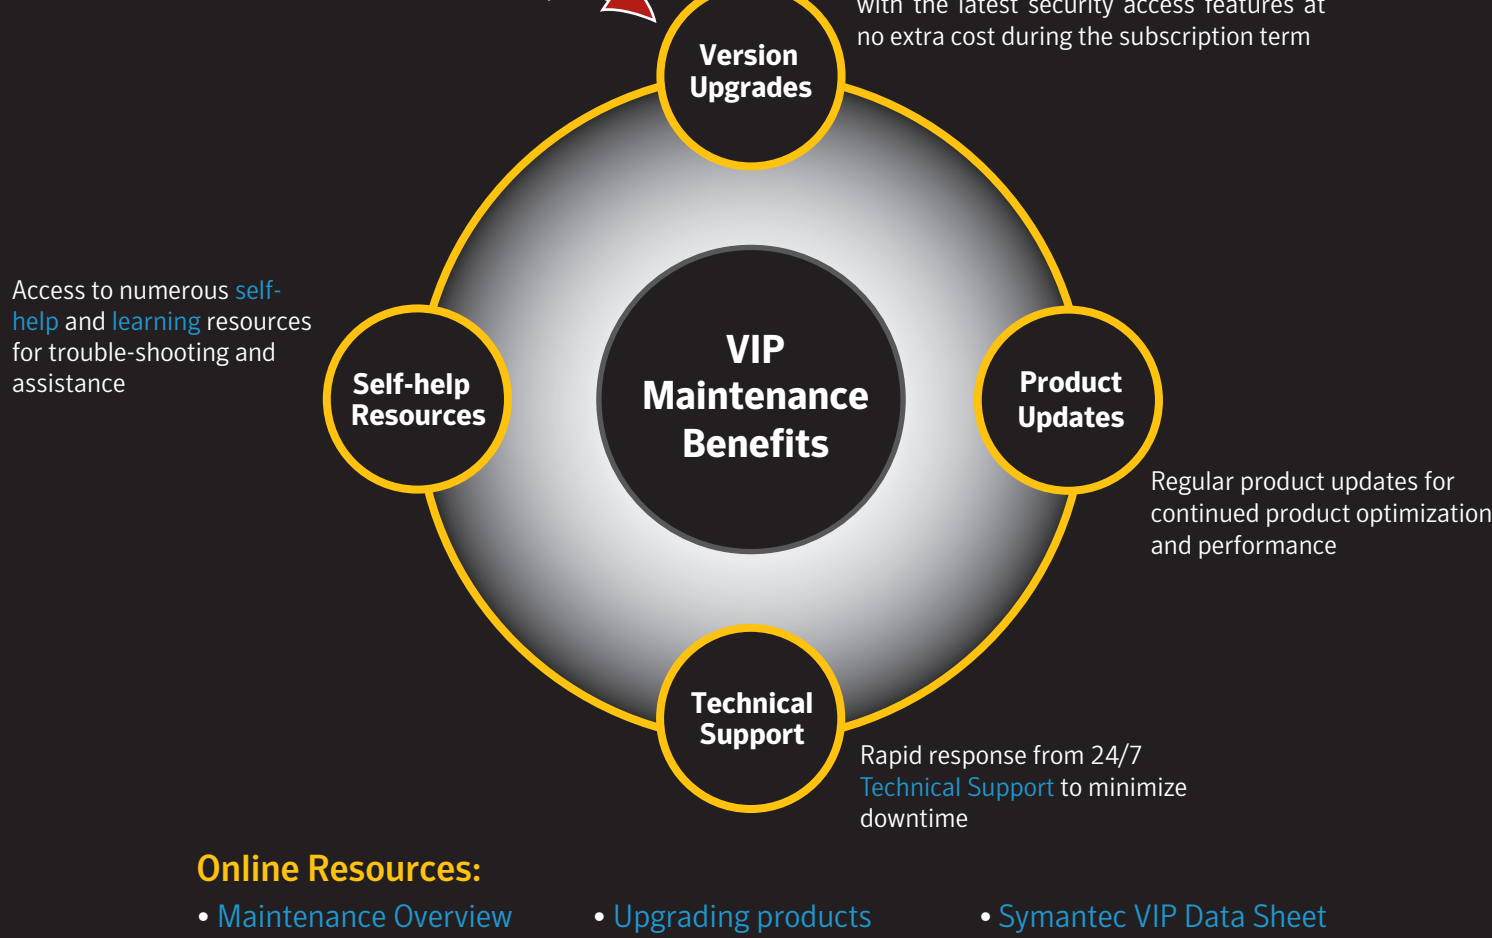

Maintenance, sustaining Symantec's products and solutions

What is VIP Cloud subscription?

Symantec™ VIP (Validation and ID Protection Service) delivers two-factor, cloud-based strong authentication that combines something you know (e.g. a username and password) with something you have (a credential such as a card, token, or mobile phone). A cloud-based infrastructure offers a secure, reliable, and scalable service delivering strong authentication without requiring a dedicated on-premises hardware server.

Maintenance: Included with VIP Cloud subscription

Protect your organization from data breaches with multi-factor authentication and learn how Maintenance maximizes your VIP investment.

Version Upgrades

An always-up-to-date version of VIP is vital for ongoing strong authentication service, supportability, and performance. Upgrades are available automatically, at no extra cost with your current subscription.

As a world-leading cybersecurity vendor, Symantec invests heavily in research and development resulting in significant product innovations, features, and architecture enhancements such as:

-  Tight integration with single sign-on (SSO) – our VIP Access Manager provides a secure and consistent single sign on experience to protect both cloud and on-premises applications
-  Great end user experience - Offer easy authentication methods such as push notification or fingerprint biometric on the mobile device so that users can quickly authenticate into their corporate resources without affecting workplace productivity
-  Broad range of one-time password (OTP) options – Deploy hardware tokens and FREE mobile credentials as well as non-smartphone options such as SMS text messages and voice calls
-  Embedded two-factor authentication (2FA) – Add strong authentication using the VIP web services API for your web application or embed VIP into your mobile application with the VIP Credential Development Kit
-  Mobile App Risk Detection – Deny access from compromised devices trying to access your network and applications and easily track all access attempts from a single console

Product Updates

During the subscription term, you will automatically have access to regular software updates, enhancements, bug fixes, and patches via regular Maintenance Packs and Minor Releases that:

-  Enable Symantec security products to work optimally, adapt to technology and operating system changes, and provide ongoing product stability
-  Provide support for any changes to new or existing industry standards and regulations on data privacy and security

The more up-to-date Symantec VIP is, the better it will function, evolve, and adapt.
